

Fund objective

This fund balances actively managed holdings of UK blue chip shares with lower risk investments. These lower risk investments can include gilt edged stocks issued by the UK government, index linked stocks, other fixed interest securities, cash deposits and commercial property. The fund's typical asset allocation is 50% blue chip equities and 50% gilts and cash. It has been designed to be less volatile than the average fund.

Note 1: Our funds are rated according to the level of volatility they show relative to other Canada Life funds, as measured by the monthly standard deviation of returns. Standard deviation gives a guide as to the probability of how much a fund price will rise or fall over one month. Volatility is one way of measuring the potential risk of a fund and should not be relied upon in isolation for making investment decisions. **The ratings are generally reviewed once a year and we do not notify policyholders or financial advisers of any change to a fund's volatility rating.**
