

Scottish Prov Caut Mgd Pn I Fund

About the Fund - 31 December, 2008

Fund Objective

This is a managed fund with a high percentage invested in fixed interest stocks. In addition, the Managers, according to their view of the investment climate, will invest in both equities and property in order to produce a reasonable level of capital appreciation.

Important Note

Important Note Past performance is not a guide to the future. Remember that the value of investments may fall as well as rise and is not guaranteed. Scottish Mutual does not guarantee the performance of any of the funds. The investment can be affected by changing conditions on the stockmarkets in which the Fund invests. Both the value of the investment, and income the Fund may pay, can go down or up. Investors are not certain to make a profit and may make a loss.

|-----------------------------|---|---|---|---|---|

© Financial Express Holdings 2009

Past performance is not a guide to the future and the value of investments may fall as well as rise. Percentage growth, bid to bid, income re-invested. Please note quartile ranking relates to the calculated value of the sector median which consists of all primary funds in the relevant sector. This median is not the same as the ABI Sector Average shown.

Scottish Mutual makes no guarantee as to the performance of the fund. Due to the launch date of the fund, only limited performance figures may be available.

Sharpe Ratio: A measure of the annual excess return (how much the fund is better or worse than the risk-free rate of return ie the yield on Government Gilts) divided by the annualised standard deviation of returns from the benchmark (a measure of how much the fund return varies from the benchmark over time). Sharpe ratio should be positive and the higher the better. It should be noted that negative Sharpe ratios are misleading and should not be used to compare the risk return characteristics of a fund.

Volatility: Volatility is represented by the Lognormal Annual Standard Deviation of the fund, (a measure of how much the fund return varies from the benchmark over time).
