

SMA Baillie Giff 350 Fund

About the Fund - 31 December, 2008

Fund Objective

Aims to achieve a total return in excess of the total return on the FTSE Actuaries 350 Index by investing in large and medium sized UK companies and, in particular, by generally investing at least 90% of the assets of the Fund in securities listed in the FTSE Actuaries 350 Index.

Important Note

Past performance is not a guide to the future. Remember that the value of investments may fall as well as rise and is not guaranteed. Scottish Mutual does not guarantee the performance of any of the funds. The investment can be affected by changing conditions on the stockmarkets in which the Fund invests. Both the value of the investment, and income the Fund may pay, can go down or up. Investors are not certain to make a profit and may make a loss. A typical collective investment vehicle has between 80 and 100 stocks in its portfolio. The Fund has a more concentrated portfolio which means that it may carry more risk than funds spread across a large number of companies. Derivatives may be entered into to hedge against various risks, as permitted by the Regulations, but will not be used for speculative purposes. As a result, in a rising market, there is a risk that potential gains may be restricted.

Fund Type	Life
Fund Management Company	Baillie Gifford

Quartile Rank Within Sector

© Financial Express Holdings 2009

Past performance is not a guide to the future and the value of investments may fall as well as rise. Percentage growth, bid to bid, income re-invested. Please note quartile ranking relates to the calculated value of the sector median which consists of all primary funds in the relevant sector. This median is not the same as the ABI Sector Average shown.

Scottish Mutual makes no guarantee as to the performance of the fund. Due to the launch date of the fund, only limited performance figures may be available.

Sharpe Ratio: A measure of the annual excess return (how much the fund is better or worse than the risk-free rate of return ie the yield on Government Gilts) divided by the annualised standard deviation of returns from the benchmark (a measure of how much the fund return varies from the benchmark over time). Sharpe ratio should be positive and the higher the better. It should be noted that negative Sharpe ratios are misleading and should not be used to compare the risk return characteristics of a fund.

Volatility: Volatility is represented by the Lognormal Annual Standard Deviation of the fund, (a measure of how much the fund return varies from the benchmark over time).
