

## SMA First State Global Emg Mkts Fund

### About the Fund - 31 December, 2008

#### Fund Objective

The Fund aims to achieve long term capital growth. The Fund invests in equities in emerging economies, including those of companies listed on developed market exchanges whose activities predominantly take place in emerging markets countries.

#### Important Note

This Fund should be considered a long-term investment. Past performance is not necessarily a guide to future and short periods of return may not reflect potential long term returns. The value of your investment may go down as well as up and we cannot guarantee that you will get back the amount you originally invested. Scottish Mutual makes no guarantee as to the performance of the Fund. You should be aware that this Fund is permitted to invest in markets that are not as well developed or regulated as the UK. It therefore may be prone to above average volatility and carry more risk, especially in the short term. The Fund is denominated in £ sterling. You should be aware that any currency movements could have an effect on the value of your investment.

Quartile Rank Within Sector

© Financial Express Holdings 2009

Past performance is not a guide to the future and the value of investments may fall as well as rise. Percentage growth, bid to bid, income re-invested. Please note quartile ranking relates to the calculated value of the sector median which consists of all primary funds in the relevant sector. This median is not the same as the ABI Sector Average shown.

Scottish Mutual makes no guarantee as to the performance of the fund. Due to the launch date of the fund, only limited performance figures may be available.

**Sharpe Ratio:** A measure of the annual excess return (how much the fund is better or worse than the risk-free rate of return ie the yield on Government Gilts) divided by the annualised standard deviation of returns from the benchmark (a measure of how much the fund return varies from the benchmark over time). Sharpe ratio should be positive and the higher the better. It should be noted that negative Sharpe ratios are misleading and should not be used to compare the risk return characteristics of a fund.

**Volatility:** Volatility is represented by the Lognormal Annual Standard Deviation of the fund, (a measure of how much the fund return varies from the benchmark over time).
