

SMA AXA Framlington Health Fund

About the Fund - 31 December, 2008

Fund Objective

Capital growth through investment in healthcare and medical services and product companies worldwide. Investment will be in producers of pharmaceuticals, biotechnology firms, medical device and instrument manufacturers, distributors of healthcare products, care providers and managers and other healthcare services companies.

Important Note

The value of investments and the income from them can fluctuate and investors may not get back the amount originally invested. Investments should be made for the long term, ie. at least five years. Past performance is not a guide to future performance. Changes in exchange rates will affect the value of investments made overseas. Investments in newer markets, smaller companies or single sectors offer the possibility of higher returns but may also involve a higher degree of risk. Investment in single sector funds offers the possibility of higher returns but may also involve a higher degree of risk.

Quartile Rank Within Sector

© Financial Express Holdings 2009

Past performance is not a guide to the future and the value of investments may fall as well as rise. Percentage growth, bid to bid, income re-invested. Please note quartile ranking relates to the calculated value of the sector median which consists of all primary funds in the relevant sector. This median is not the same as the ABI Sector Average shown.

Scottish Mutual makes no guarantee as to the performance of the fund. Due to the launch date of the fund, only limited performance figures may be available.

Sharpe Ratio: A measure of the annual excess return (how much the fund is better or worse than the risk-free rate of return ie the yield on Government Gilts) divided by the annualised standard deviation of returns from the benchmark (a measure of how much the fund return varies from the benchmark over time). Sharpe ratio should be positive and the higher the better. It should be noted that negative Sharpe ratios are misleading and should not be used to compare the risk return characteristics of a fund.

Volatility: Volatility is represented by the Lognormal Annual Standard Deviation of the fund, (a measure of how much the fund return varies from the benchmark over time).
