

SMA Fidelity Wealthbuilder Pn Fund

About the Fund - 31 December, 2008

Fund Objective

Fidelity WealthBuilder Fund is managed with the aim of providing long-term capital growth from a portfolio of Fidelity's OEIC sub-funds which are themselves invested across a broad range of world financial markets.

Important Note

The portfolio is invested in 10 to 13 Fidelity OEICs, which broadly resemble the geographic allocation of the benchmark index and gives investors access to many of Fidelity's most experienced investment professionals. The Fund is suitable for UK investors who are seeking to gain a moderate level of international diversification with emphasis on the United Kingdom. Past performance is not a guide to the future. Remember that the value of investments may fall as well as rise and is not guaranteed. Scottish Mutual does not guarantee the performance of any of the Funds. The investment can be affected by changing conditions on the stockmarkets in which the Fund invests. Both the value of the investment, and income the Fund may pay, can go down or up. Investors are not certain to make a profit and may make a loss.

Quartile Rank Within Sector

	3	3	3	1	2
--	---	---	---	---	---

© Financial Express Holdings 2009

Past performance is not a guide to the future and the value of investments may fall as well as rise. Percentage growth, bid to bid, income re-invested. Please note quartile ranking relates to the calculated value of the sector median which consists of all primary funds in the relevant sector. This median is not the same as the ABI Sector Average shown.

Scottish Mutual makes no guarantee as to the performance of the fund. Due to the launch date of the fund, only limited performance figures may be available.

Sharpe Ratio: A measure of the annual excess return (how much the fund is better or worse than the risk-free rate of return ie the yield on Government Gilts) divided by the annualised standard deviation of returns from the benchmark (a measure of how much the fund return varies from the benchmark over time). Sharpe ratio should be positive and the higher the better. It should be noted that negative Sharpe ratios are misleading and should not be used to compare the risk return characteristics of a fund.

Volatility: Volatility is represented by the Lognormal Annual Standard Deviation of the fund, (a measure of how much the fund return varies from the benchmark over time).
