

## SMA Invesco Perp Higher Inc Pn Fund

### About the Fund - 31 December, 2008

#### Fund Objective

The Invesco Perpetual High Income Fund aims to achieve a high level of income, together with capital growth. The fund intends to invest primarily in companies listed in the UK, with the balance invested internationally. In pursuing this objective, the fund managers may include other investments that they consider appropriate (which from 13th February 2004 may include units in collective investment schemes, warrants, deposits, derivatives and other permitted investments and transactions).

#### Important Note

Please remember that the value of investments and the income from them can go down as well as up (this may partly be the result of exchange rate fluctuations in investments which have an exposure to foreign currencies) and you may not get back the full amount invested. Past performance is not necessarily a guide to the future and cannot provide a guarantee of the future returns of a fund. Scottish Mutual makes no guarantee as to the performance of the fund. The annual charge will be deducted from the capital of the fund. This will increase the distributable income of the fund by an amount equal to the reduction of capital, which may constrain or even erode future capital growth. The increase in income will lead to a corresponding increase in the amount of tax payable on that income. Current tax levels and reliefs are liable to change and their value will depend on the individual's circumstances. Investment returns may be affected by changes in the basis of taxation.

<b>Fund Type</b>	Pension
<b>Fund Management Company</b>	Invesco Perpetual

Quartile Rank Within Sector

© Financial Express Holdings 2009

Past performance is not a guide to the future and the value of investments may fall as well as rise. Percentage growth, bid to bid, income re-invested. Please note quartile ranking relates to the calculated value of the sector median which consists of all primary funds in the relevant sector. This median is not the same as the ABI Sector Average shown.

Scottish Mutual makes no guarantee as to the performance of the fund. Due to the launch date of the fund, only limited performance figures may be available.

**Sharpe Ratio:** A measure of the annual excess return (how much the fund is better or worse than the risk-free rate of return ie the yield on Government Gilts) divided by the annualised standard deviation of returns from the benchmark (a measure of how much the fund return varies from the benchmark over time). Sharpe ratio should be positive and the higher the better. It should be noted that negative Sharpe ratios are misleading and should not be used to compare the risk return characteristics of a fund.

**Volatility:** Volatility is represented by the Lognormal Annual Standard Deviation of the fund, (a measure of how much the fund return varies from the benchmark over time).
