

SMA Liontrust First Income Pn Fund
About the Fund - 31 December, 2008
Fund Objective

The objective of the Liontrust First Income Fund is to provide a high level of income, with capital values keeping pace of income.

Important Note

Past performance is not necessarily a guide to future performance. The price of units and the income from them can go down as well as up and investors may not get back the amount originally invested. Scottish Mutual makes no guarantee as to the performance of the Fund. Changes in exchange rates will affect the value of trust investments overseas. Investment in smaller companies offers the possibility of higher returns but may also involve a higher degree of risk.

Quartile Rank Within Sector

© Financial Express Holdings 2009

Past performance is not a guide to the future and the value of investments may fall as well as rise. Percentage growth, bid to bid, income re-invested. Please note quartile ranking relates to the calculated value of the sector median which consists of all primary funds in the relevant sector. This median is not the same as the ABI Sector Average shown.

Scottish Mutual makes no guarantee as to the performance of the fund. Due to the launch date of the fund, only limited performance figures may be available.

Sharpe Ratio: A measure of the annual excess return (how much the fund is better or worse than the risk-free rate of return ie the yield on Government Gilts) divided by the annualised standard deviation of returns from the benchmark (a measure of how much the fund return varies from the benchmark over time). Sharpe ratio should be positive and the higher the better. It should be noted that negative Sharpe ratios are misleading and should not be used to compare the risk return characteristics of a fund.

Volatility: Volatility is represented by the Lognormal Annual Standard Deviation of the fund, (a measure of how much the fund return varies from the benchmark over time).
