

SMA Newton Income Pn Fund

About the Fund - 31 December, 2008

Fund Objective

To achieve capital growth from a portfolio of predominantly UK equities

Important Note

Past performance is not a guide to the future. Please remember that the value of shares and the income from them can fall as well as rise and investors may not get back the full amount originally invested. The value of overseas investments will be influenced by the rate of exchange used to convert back to sterling. Scottish Mutual makes no guarantee as to the performance of the Fund.

|-----------------------------|---|---|---|---|---|

© Financial Express Holdings 2009

Past performance is not a guide to the future and the value of investments may fall as well as rise. Percentage growth, bid to bid, income re-invested. Please note quartile ranking relates to the calculated value of the sector median which consists of all primary funds in the relevant sector. This median is not the same as the ABI Sector Average shown.

Scottish Mutual makes no guarantee as to the performance of the fund. Due to the launch date of the fund, only limited performance figures may be available.

Sharpe Ratio: A measure of the annual excess return (how much the fund is better or worse than the risk-free rate of return ie the yield on Government Gilts) divided by the annualised standard deviation of returns from the benchmark (a measure of how much the fund return varies from the benchmark over time). Sharpe ratio should be positive and the higher the better. It should be noted that negative Sharpe ratios are misleading and should not be used to compare the risk return characteristics of a fund.

Volatility: Volatility is represented by the Lognormal Annual Standard Deviation of the fund, (a measure of how much the fund return varies from the benchmark over time).
