

## SMA Schroder Medical Discovery Pn Fund

### About the Fund - 31 December, 2008

#### Fund Objective

The Fund aims for capital growth by investing in healthcare, medical services and related companies. It invests world-wide, but given that over half the world's healthcare companies are headquartered in the US, this market is likely to make up the largest part of the portfolio. The Fund Manager looks for companies with novel products which will be protected from competition for some time, companies which enjoy a dominant position in their own market, or companies with a product for which demand has been underestimated by other investors. In the latter case, the share price will not yet reflect the future increase in profit margins.

#### Important Note

Past performance is not necessarily a guide to future performance. The price of units and the income from them can go down as well as up and investors may not get back the amount originally invested. Scottish Mutual makes no guarantee as to the performance of the Fund.

<b>Fund Type</b>	Pension
<b>Fund Management Company</b>	Schroder

Quartile Rank Within Sector	1	4	3	3	4

© Financial Express Holdings 2009

Past performance is not a guide to the future and the value of investments may fall as well as rise. Percentage growth, bid to bid, income re-invested. Please note quartile ranking relates to the calculated value of the sector median which consists of all primary funds in the relevant sector. This median is not the same as the ABI Sector Average shown.

Scottish Mutual makes no guarantee as to the performance of the fund. Due to the launch date of the fund, only limited performance figures may be available.

**Sharpe Ratio:** A measure of the annual excess return (how much the fund is better or worse than the risk-free rate of return ie the yield on Government Gilts) divided by the annualised standard deviation of returns from the benchmark (a measure of how much the fund return varies from the benchmark over time). Sharpe ratio should be positive and the higher the better. It should be noted that negative Sharpe ratios are misleading and should not be used to compare the risk return characteristics of a fund.

**Volatility:** Volatility is represented by the Lognormal Annual Standard Deviation of the fund, (a measure of how much the fund return varies from the benchmark over time).
