Top ten target holdings by weight.	

Sector and Asset split information is based on the latest corresponding data points made available by our data provider, the collective data stated shows the combined proportionally weighted target fund holding, where such information is made available by the underlying Fund Manager. This is a binary requirement, therefore where this data is not available for one or more of the constituent funds no split data will be shown.

Fund objective

The Zurich Target Date Funds are a series of target-date portfolios. These mixed asset funds are designed to provide capital growth over specific investment terms by varying the asset exposure and therefore the risk profile of the fund as the investment period shortens. The funds primarily invest in equities and fixed-income assets although positions in alternative asset classes may be included for diversification purposes.

Fund features

Portfolio Rationale (as at July 2023):

From a positioning standpoint, our allocation remains balanced across the different regions from an Equity perspective. We continue to favour markets that offer better value and offer diversification benefits, such as Japan, the UK, or the Global Healthcare sector. We retain a significant exposure to the US market, although lower than its share in the global equity markets as it remains less attractive than other regions. Part of our exposure to the US market is invested in Mid and Small cap stocks which currently have better risk-reward characteristics relative to large cap stocks. From a Fixed Income perspective, the portfolio has meaningful exposure to global bonds, with a preference for the US curve. The Fixed income allocation is broadly diversified with significant exposure to more defensive assets such as governments bonds combined with exposures to both investment grade, high yield, and Emerging Markets debt. The Zurich TDFs are composed of both active and passive funds. We have opted to access active funds through our highest conviction managers, in the areas where we consider that they will add more value – e.g., Schroders US Small & Mid Cap or Fundsmith Equity. Passive funds are used to access areas such as US large-cap equities, emerging market equities and government bonds. Source: Morningstar Direct.
