Top ten target holdings by weight.	

Sector and Asset split information is based on the latest corresponding data points made available by our data provider, the collective data stated shows the combined proportionally weighted target fund holding, where such information is made available by the underlying Fund Manager. This is a binary requirement, therefore where this data is not available for one or more of the constituent funds no split data will be shown.

### Fund objective

The Zurich Target Date Funds are a series of target-date portfolios. These mixed asset funds are designed to provide capital growth over specific investment terms by varying the asset exposure and therefore the risk profile of the fund as the investment period shortens. The funds primarily invest in equities and fixed-income assets although positions in alternative asset classes may be included for diversification purposes.

### Fund features

Market Commentary as at 30 June 2024:

Portfolio returns were reasonable over the quarter. Equities were the key contributor to returns whilst bonds detracted at the broad asset class level.

Equities continued their upward ascent in Q2 aiding portfolio returns. Within equities, the overweight to Emerging Market Equities positively contributed to returns with the region performing strongly due to a rebound in Chinese Equities. Elsewhere in the equity sleeve, an overweight to Japan Equities hurt returns due to yen weakness whilst underweight to European Equities aided returns as European shares fell due to French election uncertainty and reduced interest rate cuts expectations.

Fixed Income had a tougher time in Q2 as expected interest rate cuts for the year were tapered back further which pushed yields up this quarter. Longer duration assets such as Treasuries contributed negatively to performance as the market pushed back further interest rate cuts.

### Target asset split (as at 31/05/2024)

US Equities	38.44%	
Money Market	21.93%	
Japanese Equities	8.78%
